

## Your Road to UltraSonic Testing Machines Training

### **Syllabus – Special Refresher UT Training Short Courses**

Refresher UT training classes are three days of 8 hour sessions centered on your specific ultrasonic inspection system (bar, billet, pipe, tube, etc.).

To initiate this training, we will ask you to obtain questions in advance from all your operators and send them to us before our training visit. This ensures that we come to the session with information focused on the clarification of actual problem issues encountered by your operators. Therefore the training material discussed will be dedicated to helping your operators improve the inspection skills in areas that they themselves have identified as troublesome.

#### **Day 1**

Review of UT basics required for your inspection system

#### **Day 2**

Answer the submitted questions and discuss inspection problems

#### **Day 3**

Spent at the inspection system site demonstrating inspection problem solutions and working with the trainees to improve their operational skills
